

## Geo-Safe-E® Series

It is well-known that geopathy and radiation fields from e-smog and radio waves can repeatedly block effective therapy if they radiate in sleeping, living and working areas.

It is no longer possible today to avoid radio waves. Many people try to correct this problem with various neutralization substances, which cannot be individually adapted to the disturbing frequencies. Just as no single shoe can fit every foot or one therapy can heal every illness, unless it is adapted to the individual, so can no "standard neutralization" eliminate all disturbing frequencies - only partial frequencies. Many of these neutralizers charge themselves, others give off a constant additional frequency in the room. However, great progress has been made in this area in the last few years. This problem can be eliminated with an individual substance mixture!

We want to introduce you to a neutralization system with 30 years of experience and a 10-year guarantee. (See the book "Radiation Fields". Please order your free copy.)

## Pocket-Safes®

Eight Pocket-Safes have been developed according to these same individualized principles and can be carried on the body. The individual testing for these neutralizers can also be completed within seconds. Since each person has his own personal energy field, a "radiation protection chip" can only be partially effective or may even be completely ineffective. During this seminar, we will show you how to individually test your patients.

## Hair analysis / blood analysis

Our service: radiation frequency test by means of hair or a few drops of blood (see the answering card).

## INNOVATION IN TREATING THERAPY BLOCKAGE

## The Geo-Safe-E® System - the Family of the Biosafe®

## The Individual Radiation Test and Therapy-Set

## Geo-Safe-E® Nosodon Test Sets

With the innovative Geo-Safe-E® Test Sets, which have already been used in many countries, you now have an expanded and focused possibility in testing for harmful radiation and eliminating therapy blockage.

These are in addition to the usual methods of testing and neutralizing. With the Geo-Safe-E® Test Sets you can exactly determine the various disturbing radiation factors which affect the cells, and then directly neutralize them. If a person with a Geo-Safe-E® or a Pocket-Safe® Nosode goes into resonance, then it is clear that either at home or at work there is radiation that is attacking them. The sleeping area should be tested and neutralized, so that the therapy is not repeatedly undermined, and the appropriate neutralizers should be placed near the bed and/or the computer desk or working place.

**An additional advantage.** The Geo-Safe-E® Test-Sets make it possible to test the cell resonances of older radiation frequencies from former sleeping and working areas and neutralize them, just as old vaccination and scar tissue can be treated. All of the users of these test sets emphasize this specialty as a significant break-through. The method of testing by which the disturbing radiation in the frequency mixtures is determined, as well as therapy possibilities for corrections, will be presented in the one-day seminars in easily understandable terms or can also be sent in booklet form.

**This will be an innovative experience that therapists responsible for the healing of patients should not miss.**

**Holistic therapy means that the causes of the radiation are eliminated or neutralized, instead of constantly treating the results therapeutically.**

**When we cause blocked energy in other people to flow again, it means that energy also flows to us!**

**Ask about the dates for seminars!**

**The Special Products with a guarantee for success or money refund from the producer**

Just as you can set up a personal bio-resonance therapy program, it also takes only a few seconds to do an individual frequency-adapted test for the Geo-Safe-E, which will accurately measure the radiation frequency mixture that is disturbing the cells of your patient in his sleeping or working area.

**What has not been considered by the usual neutralization techniques is that there is a different combination of disturbing radiation in every room.**

From geopathy (beginning at 5Hz) to e-smog (50 Hz) and also including high frequencies (approx. 6500 GHz) this could be compared to a piano chord. Since in every room completely different disturbing radiation frequencies meet, each room has its very own "frequency chord", and this necessitates its own "neutralization chord adaptation.." This is made possible by the different substance mixtures in the Geo-Safe-E series. This is the break-through in radiation neutralization. In addition, Geo-Safe-E works with physical crystalline substances, which make a charging of the materials impossible. (Biophotons ) A "protection" that is only partial, and may eliminate positive waves as well as negative ones, is superfluous. This is also true of every type of "frequency modulation", which creates an artificial standard frequency in the room.. In addition you will be shown by means of technical equipment how any "informed" neutralizations (usually in chip form) for rooms, cell phones, and computers can be destroyed through physical impulses. It can also be demonstrated that the deletion of the information which makes the neutralization ineffective, can only be a matter of time.
